Continuation of Substance of Interview including description of the general nature of what was discussed: we discussed that the "secured portions between the inner and outer tubular members" were "bonded directly" to clarify or define over the '201 patent. We also discussed the limitation of the "secured portions of the outer tubular member having a longitudinal dimension substantially shorter than the longitudinal dimension of the outer tubular member" and that at least the patents '513 and WO 93/20882 disclosed this because the outer tubular member was integral with the balloon. Authorization for the Examiner's amendment was given by Ms. Morrison.
